Consonants

stops: p, b, t, k
affricate: tʃ
fricatives: f, s, ʃ, h
nasals: m, n
laterals: l, ɬ
semi-vowels: w, j

Byington (1870) distinguishes /k'/ and /x/ as allophones of /k/.

Vowels

Byington's series:

long and short: aː, ă (= [ʌ]), eː, ɛː, iː, ɪ, oː, uː, ŭ
nasalized: ã, ĩ, õ, ũ
diphthongs: ai, au

The main function of nasalization seems to be to emphasize or define more closely.

Stress

Stress in polysyllables tends to penultimate.
